NOTES

[1] The Serbian Cyrillic lowercase italic Д may sometimes be seen as *g*. There is no specific Unicode encoding for this variant form so a comparable character has been

used here for illustrative purposes.

[2] The digraph dj(Dj) will occasionally be found as an alternative form of đ(Đ).

[3] The Serbian Cyrillic lowercase italic п may sometimes be seen as $\bar{u}$. There is no specific Unicode encoding for this variant form so a comparable character has been used here for illustrative purposes.

[4] The Serbian Cyrillic lowercase italic т may sometimes be seen as $\overline{w}$. There is no specific Unicode encoding for this variant form so a comparable character has been used here for illustrative purposes.

[5] An inventory of letter-diacritic combinations, with their Unicode encoding, in addition to the unmodified letters of the basic Roman script is:

Đ (U+0110)	đ (U+0111)
Ž (U+017D)	ž (U+017E)
Lj (U+01C8)*	lj (U+01C9)*
Ć (U+0106)	ć (U+0107)
Dž (U+01C5)*	dž (U+01C6)*
Š (U+0160)	š (U+0161)

*Note that these characters can also be reproduced with individual letters (e.g. l+j).

[6] The Roman-script columns show only lowercase forms but, when applying the table, uppercase and lowercase Roman letters as appropriate should be used.
